

LiftWise 6000 Series Tire Handler

The LiftWise 6000 Series Tire Handler can mount tires ranging in size from 55" up to 107" in diameter and weighing up to 6,000 pounds. The tire can be safely transported using the maneuverability and familiar controls of a pallet truck. The tire then can be precisely positioned onto the truck by one person using the lift, side-shift and rotation functions on the hand-held, tethered controller. A removable third roller is included and can be easily set in place to accommodate tires with diameters as small as 55".

The tire is secured using a cinching strap on the standard model, 6000SP. The 6000SP-A model utilizes arms to hold the tire in place. Several optional tire racks are available. They can store up to 4 tires and be loaded using either a forklift or the tire handler.

Specifications
